

True to combat medical simulation for the Special Forces

ARMY | PEO SIMULATION, TRAINING, AND INSTRUMENTATION

MicroHealth played a key role in the development of the SPEARPOINTS prototype, which **enhanced medical training in the prolonged field care environment** by creating an austere environment for medics to train in.

SPEARPOINTS creates a “true to combat” training scenario that gives medics and non-medical personnel the training to increase their confidence in performing critical care tasks. This allows participants to train on the processes and procedures they would otherwise never experience prior to deployment.

Let's **do more,** together.

Our Work in Action

Point of injury care @ the Army

MEDICAL SIMULATION | SOFTWARE DEV & INTEGRATION

SPEARPOINTS SNAPSHOT

- Creates a “true to combat” training scenario that gives medics and non-medical personnel the training to increase their confidence in performing critical care tasks in austere environments
- Modeled after a Special Forces Aid Station that would be found “Down Range” or in a deployed environment

THE WHAT

- Mix of environmental conditions including audio, visual, and scent distractors to increase the difficulties associated with austere patient care
- Instructor/Operators are Special Forces Medics who pull from decades of combat experience and training to create realistic injuries and scenarios

THE WHY

- Allows all team members to learn critical medical skills to help keep patients alive
- [Better healthcare outcomes](#)
